

Feeder Management

Straw Yards – round feeder

Feed too little

The pigs are hungry and looking for feed.
The feeder shows signs of being licked clean

Adequate flow

Fresh feed available with more than 50% of
the pan empty.

The pig should have to work for its feed

Excessive flow

More than 50% of the pan full of feed. The
feed starts to breakdown into meal and
become wasted

Feed waste

This has to be avoided at all costs
Feed accounts for 60-70 of the cost of
raising the pig
